**Specifications**

- There are processing marks on the cooling surface.
- In order to ensure heat sink performance, surface flatness and parallelism of the product is set to 0.02 mm or less.
- Commercial bolts (JIS B 0209-1 fitting classification: middle) pass through the threaded section.
- There is a step (about 0.5 to 1.0 mm) at the joint between the body and the cover.
- However, the cover does not go outward from the body.
- Performed matt Ni plating (2 μm) on the whole as base plating.
- When machining inside the tapped holes, inside the holes may be non-plated.

**Handling Precautions**

- Pure water or antifreeze containing corrosion inhibitor is recommended for coolant.
- Even when pure water is used, it is recommended to install an ion exchange unit to prevent a concentration increase in circulating water.
- Because city water and industrial water may corrode copper, please refrain from using.
- When attaching the tube to the fitting connection, please fix it with a tool so that no force is applied to the joint between the fitting connection and copper.
- Please note that dimensions and specifications may be changed without prior notice.

**Product Name** Copper Liquid Cold Plate

**Model number** HS-080-P50-P110-W5

**Inquiry phone number** Osaka CMB Sales office: +81-6-6532-1301

Kawasoe Texco Corporation

**Weight**: about 2.0 kg
